Why should Satellite radio have a restriction on local weather and traffic? Has XM tried to stop radio stations from broadcasting weather and traffic? Why does it bother the NAB that satellite radio is broadcasting local traffic and weather? The all mighty dollar!!! Radio stations broadcast information that THEY think we should listen to. And most of, if not all of it is paid for by a bunch of "Fat Cats" that want to keep us in the dark and feed us Bullsh--! Isn't this the "Land of the free"? What happened to freedom of speech? I resent anyone trying to restrict the information and services that XM provides. Although, if someones pockets were being lined with a few greenbacks now and then, I'm certain that this problem would have never come to light. Please, Please don't restrict satellite radio from providing instant local weather and traffic. Satellite radio is the best thing to come along since Color TV. If weather and traffic is restricted, what's next? News? Music? Sports? I say no to the NAB's petition 04-160. And I hope that you will too.  
Respectfully, Ted Marcum
